Hello,

I am writing to apply for the master's thesis project specifically the topic of "HUGSI Service Stakeholder Review" as advertised on your website careers' page. In the job posting, it was mentioned that you want to understand how your stakeholders feel about the accuracy, effectiveness and overall impact of the index on societies, business and environment.

Why this topic:

In four-plus years of my career, I have worked with various firms varying in the domain as well as the product and service spectrum. One of the most enjoying aspect of the work was to see the impact, be it sales rising or the customer satisfaction on the field. Thus, seeing this topic on the website made me feel nostalgic and excited about the prospect of working here.

In my job at [Artoo](#) (India), I was the solo person for data science and machine learning. We worked with [ideas42](#)(US) to improve and measure the usage of our product using behavior analysis. The insights and learnings from this project made me realize the importance of feedback in any product, something which I would like to replicate at your firm.

Expectation from Husqvarna Group:

I always prefer to work in a dynamic environment varying in both domain and scope of projects with interesting people and I sincerely feel Husqvarna Group fulfills this. When I saw this opportunity of thesis at Husqvarna Group, I knew it was the perfect opportunity for me to apply.

As mentioned, I've included my resume so you can learn more about my educational background and all my work experience. Thank you for your time and consideration.

Please feel free to email me, visit my website or call my cell phone at +46 736173879. Looking forward to hearing from you.

Best,
Anubhav Dikshit
