Instructions for the workshop participation

- You participate at only one workshop of the scheduled four (see the first session schedule below, other sessions will be published later)
- At the workshop, you will be asked to mention the main message(s) of your paper in a couple of sentences (at most 1 minute, no computer presentations needed)
- Read **all** papers of the participants at your workshop in advance (all papers from this day). You are advised to prepare one question per paper to enable your active participation in the class discussions.
- Read **one** paper for which you have a discussant responsibility **very carefully in advance** and prepare at least 5 questions/comments to the author of this paper. These questions/comments should not relate to the grammar or formatting but should rather be such questions that may raise discussions in the class. You are generally advised to make a longer list of questions in a priority order so that you can put as many questions as needed. You must be able to have enough questions to support discussions regarding this paper for **at least 15 minutes**. Try to address your questions to the author of the paper but also involve other students in discussions. Try to make your questions interesting for other participants.
- To be passed for the workshop session, you need to demonstrate an active participation during the entire workshop (i.e. not only in discussions for the papers you are responsible for).
